

Poly Repair® by AGRIPOLYANE

PE film repair tape

PolyRepair® is the first product of its kind developed by a greenhouse film manufacturer.

AGRIPOLYANE has incorporated the company's vast experience from the field into this unique product. The outcome is a polyethylene-based repair tape that enhances the attributes required from such a product, while at the same time it eliminates the usual problems that are common with the various products offered in the market today.

UV Stabilized for 4 years, so it can be used from the first to the last day of greenhouse cover life, if necessary.

Extreme adhesion strength. When applied on a clean and dry surface, the tape is simply impossible to remove.

Unsurpassed tensile strength. The material of the tape is stronger than any type of greenhouse film that the product will be required to protect and hold together.

Stabilizers resistant to sulfur, that leave the product unaffected under all cultivation practices

Apply and store properly¹ and you can forget all usual problems that you have been facing from such products up to now !

	Specifications	Units	Values	According to
Dimensions	Tickness (film)	µm	180	NF EN 13206
	Width	mm	96*	ISO 4592
	Length	m	20 - 30	-
Specific properties	Color	-	clear	-
	Sulfur resistance	-	3000 ppm	Manufacturer
Mechanical properties	Film's tensile strength at break	Mpa	40	ISO 527-3
	Glue adhesion strength	N	> 25	Internal method
Optical properties	Global light transmission	%	90	EN2155-5
Storage conditions ¹	Duration	Year	1	Manufacturer
	Humidity	%	up to 70	Manufacturer
	Temperature	°C	5 to 35	Manufacturer

¹Custom sizes possible upon order (width multiple of 48mm, length multiple of 5m)
